This data sheet is a summary of the specifications and conditions for MXA signal analyzers. For the complete specifications guide, visit: www.keysight.com/find/mxa\_specifications

### Accelerate to market

Every device demands decisions that require tradeoffs in your goals-customer specs, throughput, yield. With a highly flexible signal analyzer, you can manage and minimize those tradeoffs. Keysight Technologies Inc.'s mid-performance MXA is the ultimate accelerator as your products move from design to the marketplace. It has the flexibility to quickly adapt to your evolving test requirements-today and tomorrow. Maximize your flexibility, and accelerate to market, with the Keysight MXA signal analyzer.

### Definitions and Conditions

Specifications describe the performance of parameters covered by the product warranty and apply to the full temperature range of 0 to  $55 \,^{\circ}C^{1}$ , unless otherwise noted.

95th percentile values indicate the breadth of the population (approx. 2  $\sigma$ ) of performance tolerances expected to be met in 95 percent of the cases with a 95 percent confidence, for any ambient temperature in the range of 20 to 30 °C. In addition to the statistical observations of a sample of instruments, these values include the effects of the uncertainties of external calibration references. These values are not warranted. These values are updated occasionally if a significant change in the statistically observed behavior of production instruments is observed.

Typical describes additional product performance information that is not covered by the product warranty. It is performance beyond specifications that 80 percent of the units exhibit with a 95 percent confidence level over the temperature range 20 to 30 °C. Typical performance does not include measurement uncertainty.

Nominal values indicate expected performance, or describe product performance that is useful in the application of the product, but are not covered by the product warranty.

The analyzer will meet its specifications when:

- It is within its calibration cycle
- Under auto couple control, except when Auto Sweep Time Rules = Accy
- Signal frequencies < 10 MHz, with DC coupling applied
- The analyzer has been stored at an ambient temperature within the allowed operating range for at least two hours before being turned on; if it had previously been stored at a temperature range inside the allowed storage range, but outside the allowed operating range
- The analyzer has been turned on at least 30 minutes with Auto Align set to normal, or, if Auto Align is set to off or partial, alignments must have been run recently enough to prevent an Alert message; if the Alert condition is changed from Time and Temperature to one of the disabled duration choices, the analyzer may fail to meet specifications without informing the user

For the complete specifications guide, visit: www.keysight.com/find/mxa\_specifications

1. For earlier instruments (Serial number prefix < MY/SG/US5051), the full temperature ranges from 5 to 50 °C.

## Frequency and Time Specifications

| Frequency range  | DC coupled   | AC coupled   |
|--|--|--|
| Option 503   | 10 Hz to 3.6 GHz                                       | 10 MHz to 3.6 GHz  |
| Option 508   | 10 Hz to 8.4 GHz                                       | 10 MHz to 8.4 GHz  |
| Option 513   | 10 Hz to 13.6 GHz                                      | 10 MHz to 13.6 GHz   |
| Option 526   | 10 Hz to 26.5 GHz                                      | 10 MHz to 26.5 GHz   |
| Band LO multiple (N)                                     |  |  |
| 0 1  | 10 Hz to 3.6 GHz                                       |  |
| 1 1  | 3.5 to 8.4 GHz   |  |
| 2 2  | 8.3 to 13.6 GHz  |  |
| 3 2  | 13.5 to 17.1 GHz                                       |  |
| 4 4  | 17 to 26.5 GHz   |  |
| Frequency reference                                      |  |  |
| Accuracy   | ± [(time since last adjus                              | tment x aging rate) + temperature stability + calibration accuracy] <sup>1</sup> |
| Aging rate   | Option PFR   | Standard   |
|  | ± 1 x 10 <sup>-7</sup> / year                          | ± 1 x 10 <sup>-6</sup> / year  |
|  | ± 1.5 x 10 <sup>-7</sup> / 2 years                     |  |
| Temperature stability                                    | Option PFR   | Standard   |
| – 20 to 30 °C  | ± 1.5 x 10 <sup>-8</sup>                               | ± 2 x 10 <sup>-6</sup>   |
| <ul> <li>Full temperature range</li> </ul>               | ± 5 x 10 <sup>-8</sup>                                 | ± 2 x 10 <sup>-6</sup>   |
| Achievable initial calibration accuracy                  | Option PFR   | Standard   |
|  | ± 4 x 10 <sup>-8</sup>                                 | $\pm 1.4 \times 10^{-6}$   |
| Example frequency reference accuracy (with Option PFR)   | $= \pm (1 \times 1 \times 10^{-7} + 5 \times 10^{-7})$ | ) <sup>-8</sup> + 4 x 10 <sup>-8</sup> )   |
| 1 year after last adjustment                             | $= \pm 1.9 \times 10^{-7}$                             |  |
| Residual FM  |  |  |
| <ul> <li>Option PFR</li> </ul>                           | ≤ (0.25 Hz x N) p-p in 2                               | 0 ms, nominal  |
| – Standard   | ≤ (10 Hz x N) p-p in 20 i                              | ms, nominal  |
|  | See band table above f                                 | or N (LO multiple)   |
| Frequency readout accuracy (start, stop, center, marker  | r)   |  |
| ± (marker frequency x frequency reference accuracy + 0.2 | 25 % x span + 5 % x RBW + 2                            | Hz + 0.5 x horizontal resolution <sup>2</sup> )                                  |
| Marker frequency counter                                 |  |  |
| Accuracy   | ± (marker frequency x f                                | requency reference accuracy + 0.100 Hz)  |
| Delta counter accuracy                                   | ± (delta frequency x fre                               | quency reference accuracy + 0.141 Hz)  |
| Counter resolution                                       | 0.001 Hz   |  |
| Frequency span (FFT and swept mode)                      |  |  |
| Range  | 0 Hz (zero span), 10 Hz                                | to maximum frequency of instrument   |
| Resolution   | 2 Hz   |  |
| Accuracy   |  |  |
| – Swept  | ± (0.25 % x span + horiz                               | zontal resolution)   |
|  |  |  |

 When used with external frequency reference 1 pulse-per-second (PPS), such as the J7203A atomic frequency reference (AFR), the reference tracking accuracy needs to be taken into account for calculation of the overall frequency accuracy. Refer to the MXA signal analyzer specifications guide (part number: N9020-90113) for more details.

2. Horizontal resolution is span/(sweep points - 1).

### Frequency and Time Specifications (continued)

| Sweep time and triggering                                       |  |                                     |
|---|--|-------------------------------------|
| Range   | Span = 0 Hz  | 1 μs to 6000 s                      |
|   | Span ≥ 10 Hz   | 1 ms to 4000 s                      |
| Accuracy  | Span ≥ 10 Hz, swept  | ± 0.01 %, nominal                   |
|   | Span ≥ 10 Hz, FFT  | ± 40 %, nominal                     |
|   | Span = 0 Hz  | ± 0.01 %, nominal                   |
| Trigger   | Free run, line, video, external 1, exte                    | rnal 2, RF burst, periodic timer    |
| Trigger delay   | Span = 0 Hz or FFT   | –150 to +500 ms                     |
|   | Span ≥ 10 Hz, swept  | 0 to 500 ms                         |
|   | Resolution   | 0.1 μs                              |
| Time gating   |  |                                     |
| <ul> <li>Gate methods</li> </ul>                                | Gated LO; gated video; gated FFT                           |                                     |
| <ul> <li>Gate length range (except method =<br/>FFT)</li> </ul> | 100.0 ns to 5.0 s  |                                     |
| <ul> <li>Gate delay range</li> </ul>                            | 0 to 100.0 s   |                                     |
| – Gate delay jitter   | 33.3 ns p-p, nominal                                       |                                     |
| Sweep (trace) point range                                       |  |                                     |
| All spans   | 1 to 40001   |                                     |
| Resolution bandwidth (RBW)                                      |  |                                     |
| Range (–3.01 dB bandwidth)                                      | 1 Hz to 3 MHz (10 % steps), 4, 5, 6, 8                     | MHz                                 |
| Bandwidth accuracy (power)                                      | 1 Hz to 750 kHz  | ± 1.0 % (± 0.044 dB)                |
|   | 820 kHz to 1.2 MHz (< 3.6 GHz CF)                          | ± 2.0 % (± 0.088 dB)                |
|   | 1.3 to 2 MHz (< 3.6 GHz CF)                                | ± 0.07 dB, nominal                  |
|   | 2.2 to 3 MHz (< 3.6 GHz CF)                                | ± 0.15 dB, nominal                  |
|   | 4 to 8 MHz (< 3.6 GHz CF)                                  | ± 0.25 dB, nominal                  |
| Bandwidth accuracy (–3.01 dB)                                   |  |                                     |
| - RBW range   | 1 Hz to 1.3 MHz  | ± 2 %, nominal                      |
| Selectivity (-60 dB/-3 dB)                                      | 4.1:1, nominal   |                                     |
| EMI bandwidth (CISPR compliant)                                 | 200 Hz, 9 kHz, 120 kHz, 1 MHz                              | (Option EMC or N6141A required)     |
| EMI bandwidth (MIL STD 461E compliant)                          | 10 Hz, 100 Hz, 1 kHz, 10 kHz,<br>100 kHz, 1 MHz (standard) | (Option EMC or N6141A required)     |
| Analysis bandwidth <sup>1</sup>                                 |  |                                     |
| Maximum bandwidth   | Option B1X   | 160 MHz                             |
|   | Option B1A   | 125 MHz                             |
|   | Option B85   | 85 MHz                              |
|   | Option B40   | 40 MHz                              |
|   | Option B25 (standard)                                      | 25 MHz                              |
|   | Standard   | 10 MHz                              |
| Video bandwidth (VBW)   |  |                                     |
| Range   | 1 Hz to 3 MHz (10 % steps), 4, 5, 6, 8                     | MHz, and wide open (labeled 50 MHz) |
| Accuracy  | ±6%, nominal   |                                     |
| Measurement speed <sup>2</sup>                                  | Standard   |                                     |
| Local measurement and display update rate                       | 4 ms (250/s) nominal                                       |                                     |
| Remote measurement and LAN transfer rate                        | 5 ms (200/s) nominal                                       |                                     |
| Marker peak search  | 1.5 ms, nominal  |                                     |
| Center frequency tune and transfer (RF)                         | 20 ms, nominal   |                                     |
| Center frequency tune and transfer ( $\mu$ W)                   | 47 ms, nominal   |                                     |
| Measurement/mode switching                                      | 39 ms, nominal   |                                     |
|   |  |                                     |

1. Analysis bandwidth is the instantaneous bandwidth available around a center frequency over which the input signal can be digitized for further analysis or processing in the time, frequency, or modulation domain.

Sweep points = 101. Apply for instruments with S/N prefix ≥ MY/SG/US4910 or earlier instruments with Option PC2 or PC4. Otherwise, refer to the MXA specification guide.

### Amplitude Accuracy and Range Specifications

| Amplitude range                                 |   |                               |                        |
|---|---|-------------------------------|------------------------|
| Measurement range                               |   |                               |                        |
| Preamp Off                                      | Displayed average noise level (DA         | NL) to +30 dBm                |                        |
| Preamp On                                       |   |                               |                        |
| – RF (Opt 503)                                  | Displayed average noise level (DA         | NL) to +30 dBm                |                        |
| – Microwave (Opt 508, 513, 526)                 | Displayed average noise level (DA         | NL) to +24 dBm                |                        |
| Input attenuator range                          | 0 to 70 dB in 2 dB steps                  |                               |                        |
| Electronic attenuator (Option EA3)              |   |                               |                        |
| Frequency range                                 | 10 Hz to 3.6 GHz                          |                               |                        |
| Attenuation range                               |   |                               |                        |
| <ul> <li>Electronic attenuator range</li> </ul> | 0 to 24 dB, 1 dB steps                    |                               |                        |
| <ul> <li>Full attenuation range</li> </ul>      | 0 to 94 dB, 1 dB steps                    |                               |                        |
| (mechanical + electronic)                       |   |                               |                        |

DC coupling required to meet specifications below 50 MHz. With AC coupling, specifications apply at frequencies of 50 MHz and higher. Statistical observations at 10 MHz with AC coupling show that most instruments meet the DC-coupled specifications, however, a small percentage of instruments are expected to have errors exceeding 0.5 dB at 10 MHz at the temperature extreme. The effect at 20 to 50 MHz is negligible but not warranted.

2. Apply for instruments with S/N prefix ≥ MY/SG/US5051. For older instruments, refer to the MXA Specification Guide.

## Amplitude Accuracy and Range Specifications (continued)

| Total absolute amplitude accuracy       |   | Specifications                                   |

## Real-Time Spectrum Analyzer (RTSA)<sup>1</sup>

### Option RT1 or RT2

### Real-time analysis

| Real-time analysis bandwidth       |                                     |   |
|------------------------------------|-------------------------------------|---|
| <ul> <li>Option RT1</li> </ul>     | Up to 160 MHz                       | Analysis BW option determines the max real-time bandwidth                           |
| <ul> <li>Option RT2</li> </ul>     | Up to 160 MHz                       | Analysis BW option determines the max real-time bandwidth                           |
| Minimum detectable signal duration | with > 60 dB StM <sup>2</sup> ratio |   |
| <ul> <li>Option RT1</li> </ul>     | 11.42 ns                            |   |
| <ul> <li>Option RT2</li> </ul>     | 5.0 ns                              |   |
| Minimum signal duration with 100%  | probability of Frequency Mask Trig  | ggering (FMT) at full amplitude accuracy  |
| <ul> <li>Option RT1</li> </ul>     | 17.3 μs                             | Signal is at mask level   |
| <ul> <li>Option RT2</li> </ul>     | 3.57 µs                             | Signal is at mask level   |
| Minimum acquisition time           | 100 µs                              |   |
| FFT rate                           | 292,969/s                           |   |
| Supported triggers                 | Level, Level with time qu           | ualified (TQT), Line, External, RF burst, Frame, Frequency mask (FMT), FMT with TQT |

1. For additional RTSA specifications, please refer to Option RT1/RT2 Chapter in the MXA Signal Analyzer specifications guide (part number: N9020-90113)

2. StM = "Signal-to-Mask"

### myKeysight

### **myKeysight**

### www.keysight.com/find/mykeysight

A personalized view into the information most relevant to you.

#### www.lxistandard.org

LAN eXtensions for Instruments puts the power of Ethernet and the Web inside your test systems. Keysight is a founding member of the LXI consortium.

### Three-Year Warranty

### www.keysight.com/find/ThreeYearWarranty

Keysight's commitment to superior product quality and lower total cost of ownership. The only test and measurement company with three-year warranty standard on all instruments, worldwide.

### Keysight Assurance Plans

### www.keysight.com/find/AssurancePlans

Up to five years of protection and no budgetary surprises to ensure your instruments are operating to specification so you can rely on accurate measurements.
