Product Brief

VIAVI ALT-8015

FMCW/Military Pulse Radio Altimeter Flight Line Test Set

Versatile, time-saving, portable test set for testing installed FMCW and military pulse radio altimeters.

The VIAVI ALT-8015 is the world's first and only RF-based portable radio altimeter flight line test set. The ALT-8015 tests from the TX/RX antennas to the indicator in the cockpit, allowing the operator to replicate in-flight conditions, and isolate a bad component of the installed system.

Features

- Tests military pulse radio altimeters: AN/APN-171(V), AN/APN-194(V) and AN/APN-209(V), including LPI variants
- Tests FMCW radio altimeters including CDF types
- Direct-connect to UUT T/R or to installed system via antenna couplers
- Fast detector for tracking LPI radio altimeters with TX power management
- Software upgradeable
- Parametric measurements of TX power / frequency / pulse width / FM deviation /PRF

Benefits

- Perform a complete system test, allowing the operator to replicate in-flight conditions and isolate a bad component of the installed system
- Create profiles to control dynamic altitude simulations
- Radio-metric RF loop test allows TX, RX, antenna or feeder faults to be identified

Applications

- Terrain Awareness Warning System (TAWS) installation
- Simulate a complete landing approach, including a flare out
- Simulate a takeoff and departure
- Replicate actual airborne conditions

RF Coupling

The supplied antenna couplers allow the radio altitude system to be quickly verified, without access being required to test ports on the UUT LRU. Direct connection to the T/R unit is also possible.

Supplied 20ft RF Coax Cables
