Keysight Technologies E4982A LCR Meter 1 MHz to 300 MHz/500 MHz/1 GHz/3 GHz

Data Sheet

Definitions

Specification (spec.):

Warranted performance. Specifications include guardbands to account for the expected statistical performance distribution, measurement uncertainties, and changes in performance due to environmental conditions. Supplemental information is intended to provide information that is helpful for using the instrument but that is not guaranteed by the product warranty.

Typical (typ.):

Describes performance that will be met by a minimum of 80% of all products. It is not guaranteed by the product warranty.

Supplemental performance data (SPD):

Represents the value of a parameter that is most likely to occur; the expected mean or average. It is not guaranteed by the product warranty.

General characteristics:

A general, descriptive term that does not imply a level of performance.

Basic Measurement Characteristic

Measurement parameters	
Impedance parameters	Z , Y , Ls, Lp, Cs, Cp, Rs, Rp, X, G, B, D, Q, Øz [°], Øz [rad], Øy [°], Øy [rad], User defined parameter (A maximum of four parameters can be displayed at one time.)
Measurement range	
Impedance parameters	140 mΩ to 4.8 kΩ (Frequency = 1 MHz, Averaging factor = 8, Measurement time mode = 3, Oscillator level = 1 dBm, Measurement uncertainty $≤ \pm$ 10%, Calibration is performed within 23 °C ± 5 °C, Measurement is performed within ± 5 °C from the calibration temperature)

Source Characteristics

Frequency					
Range	1 MHz to 300 MHz (Option 030) 1 MHz to 500 MHz (Option 050) 1 MHz to 1 GHz (Option 100) 1 MHz to 3 GHz (Option 300)				
Resolution	100 kHz				
Uncertainty	± 10 ppm (23 °C ± 5 °C) ± 20 ppm (5 °C to 40 °C)				
Oscillator level					
Cable Length = 1m:					
Power range (When 50 Ω LOAD is connected to test port)	-40 dBm to 1dBm				
Current range (When SHORT is connected to test port)	0.0894 mArms to 10 mArms				
Voltage range (When OPEN is connected to test port)	4.47 mVrms to 502 mVrms				
Uncertainty (When 50 Ω LOAD is connected to test port)	(23 °C ± 5 °C) ± 2 dB (frequency ≤ 1 GHz) ± 3 dB (frequency > 1 GHz)				
	(5 °C to 40 °C) ± 4 dB (frequency ≤ 1 GHz) ± 5 dB (frequency > 1 GHz)				
Resolution	0.1 dB (When the unit is set at mV or mA, the entered value is rounded to 0.1 dB resolution.)				
Cable Length = 2m (When option 00	12 is used):				
Power range	Subtract the following attenuation from the power (setting value) at 1 m cable length: Attenuation [dB] = 0.42 \sqrt{f} (f: Frequency [GHz])				
Uncertainty (When 50 Ω LOAD is connected to test port)	(23 °C ± 5 °C) ± 3 dB (frequency ≤ 1 GHz) ± 4 dB (frequency > 1 GHz)				
	(5 °C to 40 °C) \pm 5 dB (frequency \leq 1 GHz) \pm 6 dB (frequency > 1 GHz)				
Resolution	0.1 dB (When the unit is set at mV or mA, the entered value is rounded to 0.1 dB resolution.)				

Output impedance

Output impedance	50 Ω (nominal)	
------------------	----------------	--

Measurement Accuracy

Condition for definition of accuracy:

- 23 °C ± 5 °C
- 7-mm connector of 3.5-mm-7-mm adapter connected to 3.5-mm terminal of test heads

Basic measurement uncertainty (Typical)

0.45 %

Measurement uncertainty

When OPEN/SHORT/LOAD calibration is performed:

Z , Y	$\pm \left(E_{a} + E_{b} \right) \left[\% \right]$
$\Delta heta$	$\pm \frac{\left(E_{a} + E_{b}\right)}{100} [rad]$
L, C, X, B	$\pm \left(E_{a} + E_{b} \right) \times \sqrt{(1 + D_{x}^{2})} \ \left[\% \right]$
R, G	$\pm (E_a + E_b) \times \sqrt{(1 + Q_x^2)} [\%]$
ΔD	
at $\left D_{x} \operatorname{tan} \left(\frac{E_{a} + E_{b}}{100} \right) \right < 1$	$\pm \frac{\left(1 + D_x^2\right) \tan\left(\frac{E_b + E_b}{100}\right)}{1 \pm D_x \tan\left(\frac{E_b + E_b}{100}\right)}$
Especially, at $D_x \le 0.1$	$\pm \frac{E_a + E_b}{100}$
Δ0	
at $\left \Omega_x \tan \left(\frac{E_a + E_b}{100} \right) \right < 1$	$\pm \frac{\left(1 + \Omega_x^2\right) \tan\left(\frac{E_b + E_b}{100}\right)}{1 \pm \Omega_x \tan\left(\frac{E_b + E_b}{100}\right)}$
Especially, at $\frac{10}{E_a + E_b} \ge \Omega_x \ge 10$	$\pm \ \mathbf{Q}_{x}^{2} \ \frac{\mathbf{E}_{a} + \mathbf{E}_{b}}{100}$

Measurement uncertainty

When OPEN/SHORT/LOAD/Low Loss capacitance calibration is performed (SPD):

Z, Y	$\pm \left(E_{a} + E_{b}\right) \left[\%\right]$
$\Delta heta$	$\pm \frac{E_c}{100}$ [rad]
L, C, X, B	$\pm \sqrt{\left(E_{a} + E_{b}\right)^{2} + \left(E_{c}D_{x}\right)^{2}} [\%]$
R, G	$\pm \sqrt{\left(E_{a} + E_{b}\right)^{2} + \left(E_{c}Q_{x}\right)^{2}} \left[\%\right]$
ΔD	
at $\left D_x \tan \left(\frac{E_c}{100} \right) \right < 1$	$\pm \frac{\left(1 + D_x^2\right) \tan\left(\frac{E_c}{100}\right)}{1 \ m D_x \tan\left(\frac{E_c}{100}\right)}$
Especially, at $D_x \le 0.1$	$\pm \frac{E_c}{100}$
ΔΟ	
at $\left \Omega_x \tan \left(\frac{E_c}{100} \right) \right < 1$	$\pm \frac{\left(1 + Q_x^2\right) \tan \left(\frac{E_c}{100}\right)}{1 \pm Q_x \tan \left(\frac{E_c}{100}\right)}$
Especially, at $\frac{10}{E_c} \ge 0_x \ge 10$	$\pm \ \Omega_x^2 \ \frac{E_c}{100}$

Definition of each parameter

Dx =	Measurement value of D								
Qx =	Measurement value of Q								
Ea =	Within 23 ± 5 °C from the calibration temperature. Measurement accuracy applies when the calibration is performed at 23 ± 5 °C. When the calibration is performed beyond 23 ± 5 °C, the measurement accuracy decreases to half that described.

Condition: Display Off or :DISP:UPD OFF, Trigger delay=0, Point delay=0 E4982A OS: Windows 7 (Serial Prefix: MY523)

Test condition for Measurement Time

The measurement time of E4982A is scattered to some extent by an overhead of the internal operation system and other conditions, so it is difficult to define the specification of handler interface timing. Thus, for your reference, we provide "SPD" data on it in table by defining the following test condition.

Median: Median value of running one minute of measurement data Max.: Maximum value of running one minute of measurement data

NOTE

- The instrument's operating system sometimes suffers interruptions during measurement, and we sometimes observe
 an extremely large overhead in handler interface timings. The table excludes such special cases, thus you can
 sometimes see timing over the maximum value data shown in the table. If you make a handshake using the
 READY_FOR_TRIGGER signal of the handler interface, your test system can continue to work correctly regardless of
 such an irregular measurement time drift.
- 2. If your system communicates with external devices, you will see longer timing results than those on the table.
- In the case of using a bus trigger in the GPIB/LAN/USB system instead of the handler interface, you should measure the test cycle time for yourself, because the system performance depends heavily on the system parameters. Of course, you will see much longer test cycle times from your system software overhead.

Measurement Support Functions Error correction function

Available calibration and compensation

OPEN/SHORT/LOAD calibration	Connect OPEN, SHORT, and LOAD standards to the desired reference plane and measure each kind of calibration data. The reference plane is called calibration reference plane.
Low-Loss capacitor calibration	Connect the dedicated standard (Low-Loss capacitor) to the calibration reference plane and measure the calibration data.
Port extension compensation (Fixture selection)	When a device is connected to the terminal that is extended from the calibration reference plane, set the electrical length between the calibration plane and the device contact. Select a model number of the registered test fixtures in the E4982A's softkey menu or enter the electrical length for user's test fixture.
OPEN/SHORT compensation	When a device is connected to the terminal that is extended from the calibration reference plane, make OPEN and/or SHORT states at the device contact and measure each kind of compensation date.

Calibration/compensation data measurement point

Data measurement points	Same as measurement points which are set in the measurement point setup display.
	(Changing the frequency, oscillator level, or measurement speed settings after the calibration or
	compensation makes the calibration and compensation data invalid.)
DC registence (Dde) maggurement	

DC resistance (Rdc) measu	rement
Measurement range	0.1 Ω to 100 Ω
Measurement resolution	1 mΩ
Test Signal Level	1 mA (maximum)
Error correction	OPEN/SHORT/LOAD Calibration, OPEN/SHORT Compensation. (Changing the frequency or oscil- lator level settings after the calibration or compensation makes the calibration and compensation data invalid.)
Measurement uncertainty (SPD)	$\pm \left[1 + \left(\frac{0.05}{\text{Rdut}} + \frac{\text{Rdut}}{10000}\right) \times 100\right] \left[\%\right] \text{ Rdut : DC resistance measurement value } \left[\Omega\right]$
	(At averaging factor=128, within \pm 5 °C from the calibration temperature. Measurement accuracy applies when the calibration is performed at 23 °C \pm 5 °C. When the calibration is performed beyond 23 °C \pm 5 °C, the measurement accuracy decreases to half that described.)
Trigger function	
Trigger mode	Internal, External (external trigger input connector or handler interface), Bus (GPIB, USB or LAN), Manual (front key)
Measurement time	
Time	Mode 1 (Short), Mode 2 (Mid), Mode 3 (Long)
Averaging function	
Setting range	1 to 100 (integer)
List measurement function	
Number of measurement points	201 points for each table (maximum)
Number of tables	8 tables

Interface

Intoriado	
GPIB	24-pin D-Sub (Type D-24), female; compatible with IEEE-488. IEEE-488 interface specification is designed to be used in environment where electrical noise is relatively low. LAN or USBTMC interface is recommended to use at the higher electrical noise environment.
USB host port	Universal serial bus jack, Type A configuration; female; provides connection to mouse, key board, printer or USB stick memory.
USB (USBTMC) interface port	Universal serial bus jack, Type B configuration (4 contacts inline); female; provides connection to an external PC; compatible with USBTMC-USB488 and USB 2.0.LA USB Test and Measurement Class (TMC) interface that communicates over USB, complying with the IEEE 488.1 and IEEE 488.2 standards.
LAN	10/100/1000 Base T Ethernet, 8-pin configuration; auto selects between the two data rates
Video output	15-pin mini D-Sub; female; drives VGA compatible monitors

Handler interface

Connector type	36-pin centronics, female	
Signal type	Negative logic, opto-isolated, open collector output	
Output signal	BIN sort result (BIN 1 to BIN 13, OUT_OF_GOOD_BINS)

From Hewlett-Packard through Agilent to Keysight

For more than 75 years, we've been helping you unlock measurement insights. Our unique combination of hardware, software and people can help you reach your next breakthrough. Unlocking measurement insights since 1939.

myKeysight

myKeysight

www.keysight.com/find/mykeysight

A personalized view into the information most relevant to you.

Three-Year Warranty

www.keysight.com/find/ThreeYearWarranty

Keysight's committed to superior product quality and lower total cost of ownership. Keysight is the only test and measurement company with three-year warranty standard on all instruments, worldwide. And, we provide a full one-year warranty on all accessories, calibration devices, systems and custom products.

Keysight Infoline

Keysight Assurance Plans

www.keysight.com/find/AssurancePlans

Up to five years of protection and no budgetary surprises to ensure your instruments are operating to specification so you can rely on accurate measurements.

Keysight Infoline

www.keysight.com/find/service

Keysight's insight to best in class information management. Free access to your Keysight equipment company reports and e-library.

Keysight Channel Partners
