Cable and Antenna Analysis

The CX200, standard, Cable and Antenna Analysis feature enables testing of Distance to Fault, VSWR, and Return Loss using its built-in 1-port Vector Network Analyzer. For precise, calibrated measurements, this option requires the Short-Open-Load Calibrator.

Auto-Test Applications (Optional)

The CX200 provides fully automated radio testing and alignment for today's land mobile radios. With precise instrumentation and automation, it optimizes radio performance in minutes with minimal user input.

Supporting a wide range of automated test and alignment options, the device allows users to customize test sequences and parameters to meet specific requirements. Once configured, it enables real-time monitoring of both test progress and results.

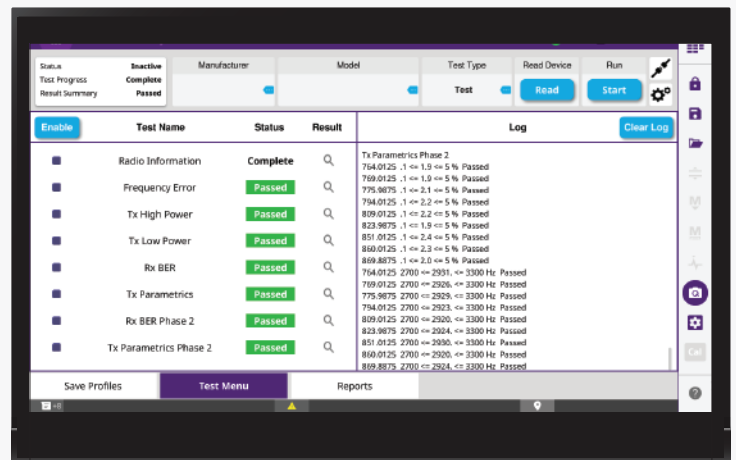

Test data is automatically stored and can be exported via USB to an external PC for documentation and printing. Your test data can also be uploaded to VIAVI StrataSync or transferred to a PC or portable device utilizing the Smart Access Anywhere app.

VIP Tool (Optional)

The VIP Tool removes unnecessary complexities with traditional instrument programming by leveraging the power of Microsoft Excel. It is scalable, allowing you to create scripts that are as simple or as intricate as you desire. This tool allows you to easily create and export easy-to-read reports with supporting graphics, like Channel Analyzer and Distribution Plots. Work smarter, not harder with the VIP Tool.
